

# NSK Linear Guide™

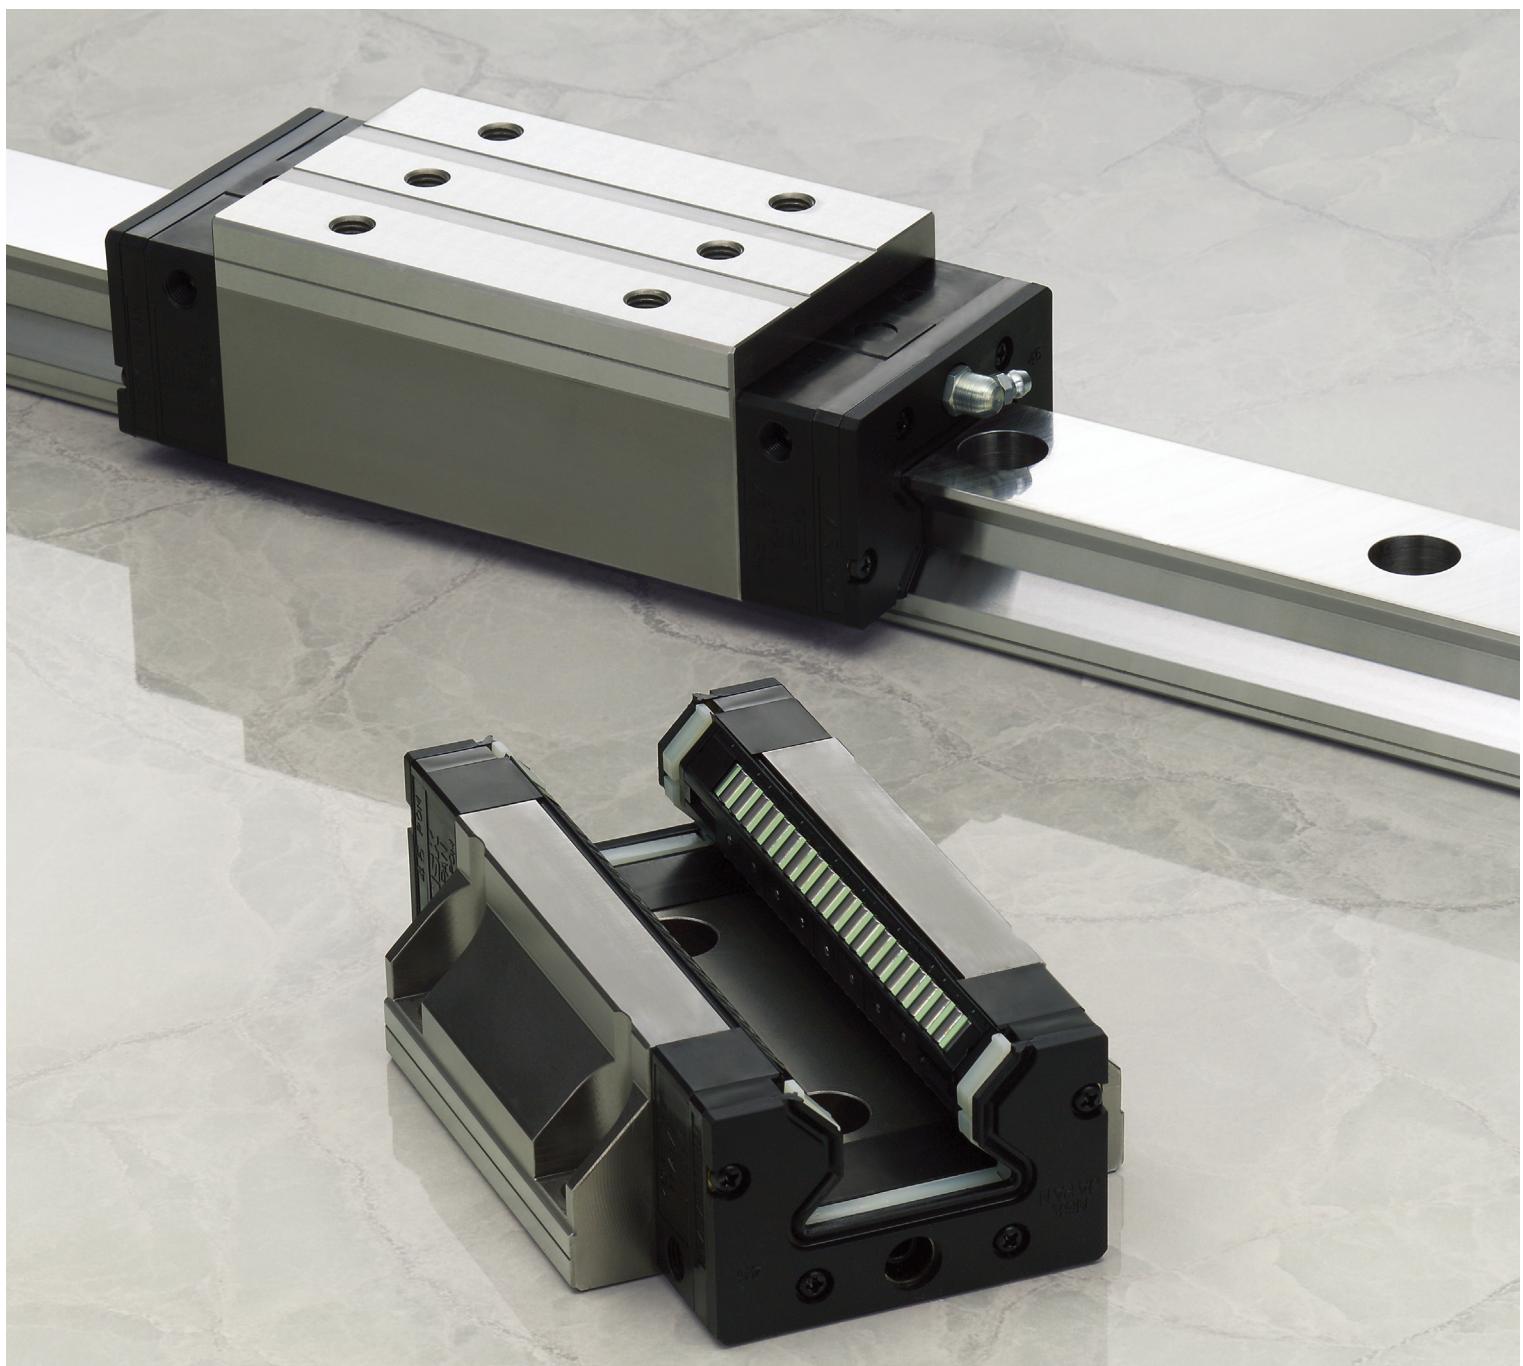

## Roller Guide RA Series

A roller guide series employing advanced analysis technology offers super-high load capacity and rigidity.

The latest series is now available in the random matching of rails and roller slides, which includes random matching with preload for higher accuracy and rigidity, allowing the users to select rails and roller slides in single unit quantities.

Highly dustproof V1 seal and V1 bottom seal which improve dustproof performance are also available.

*Expansion  
of the  
Series*

# The fruits of comprehensive technology of NSK. RA series roller guides handle a diversity of applications

The RA series of roller guides is the product of a combination of NSK's extensive experience in roller bearings and linear guide technologies. The result is an optimal design that takes full advantage of NSK's unique expertise to realize super-high load capacity, rigidity and motion accuracy, plus smooth motion. Capable of handling a variety of applications, the RA series supports high machine performance.

## RA series features support high machine performance

### Super-long Life

#### Super-high load capacity

NSK has realized super-high load capacity, now the highest performance in the world, and achieved unprecedented operating life.

#### Maintenance-free

Installing an NSK K1™ lubrication unit assures long-term, maintenance-free operation.

#### Highly dust-proof

The high performance seals as standard equipment completely block the entry of foreign matter and maintain primary performance over the long term.

### Contribution to High-precision Manufacturing

#### Super-high rigidity

Super-high rigidity provides high-precision manufacturing.

#### Super-high motion accuracy

Coupled with NSK's unique design approach, the vibration caused by roller passage has been substantially reduced. This will greatly contribute to improve machining quality.

#### Smooth motion

The installation of a retaining piece achieves smooth motion, resulting in stable positioning accuracy.

**The RA series is available in eight models:  
RA15, 20, 25, 30, 35, 45, 55 and 65.**

### Used in Many Fields

#### Complete series

Series includes a full lineup from small to large, including low-profile sizes. You can choose the model according to the application.

#### Interchangeable mounting dimensions

Outside dimensions and mounting dimensions conform to standard dimensions for the market, so RA series roller guides can be used without having to alter machine design. (See page 14 for mounting surface dimensions)

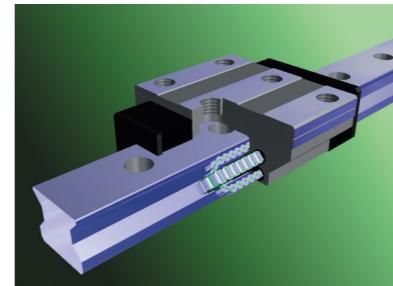

#### Low friction

Uses rollers for rolling elements to hold down dynamic friction.

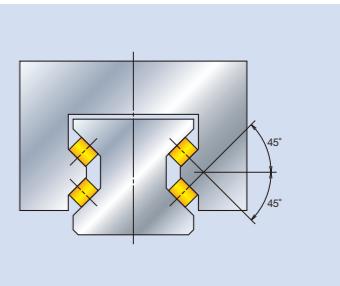

### Optimal Design

NSK executed a comprehensive, detailed performance simulation of roller guides by integrating its analysis technology and the tribology technology that the company had been developing over many years.

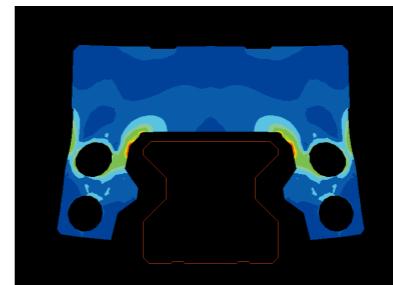

Down to the dimensions and shapes of component details, we have attained an optimal design completely.

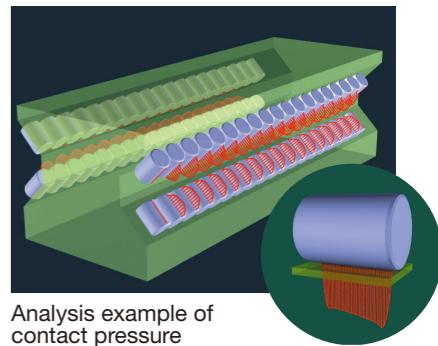

Smooth motion by use of retaining pieces

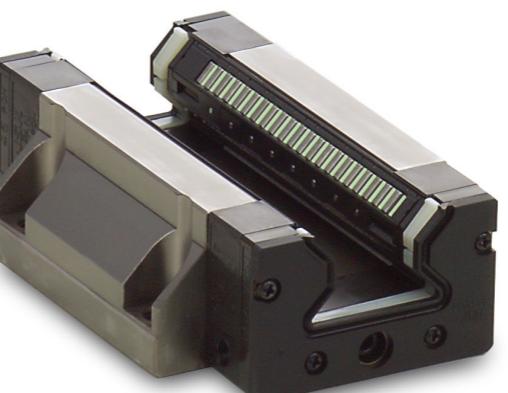

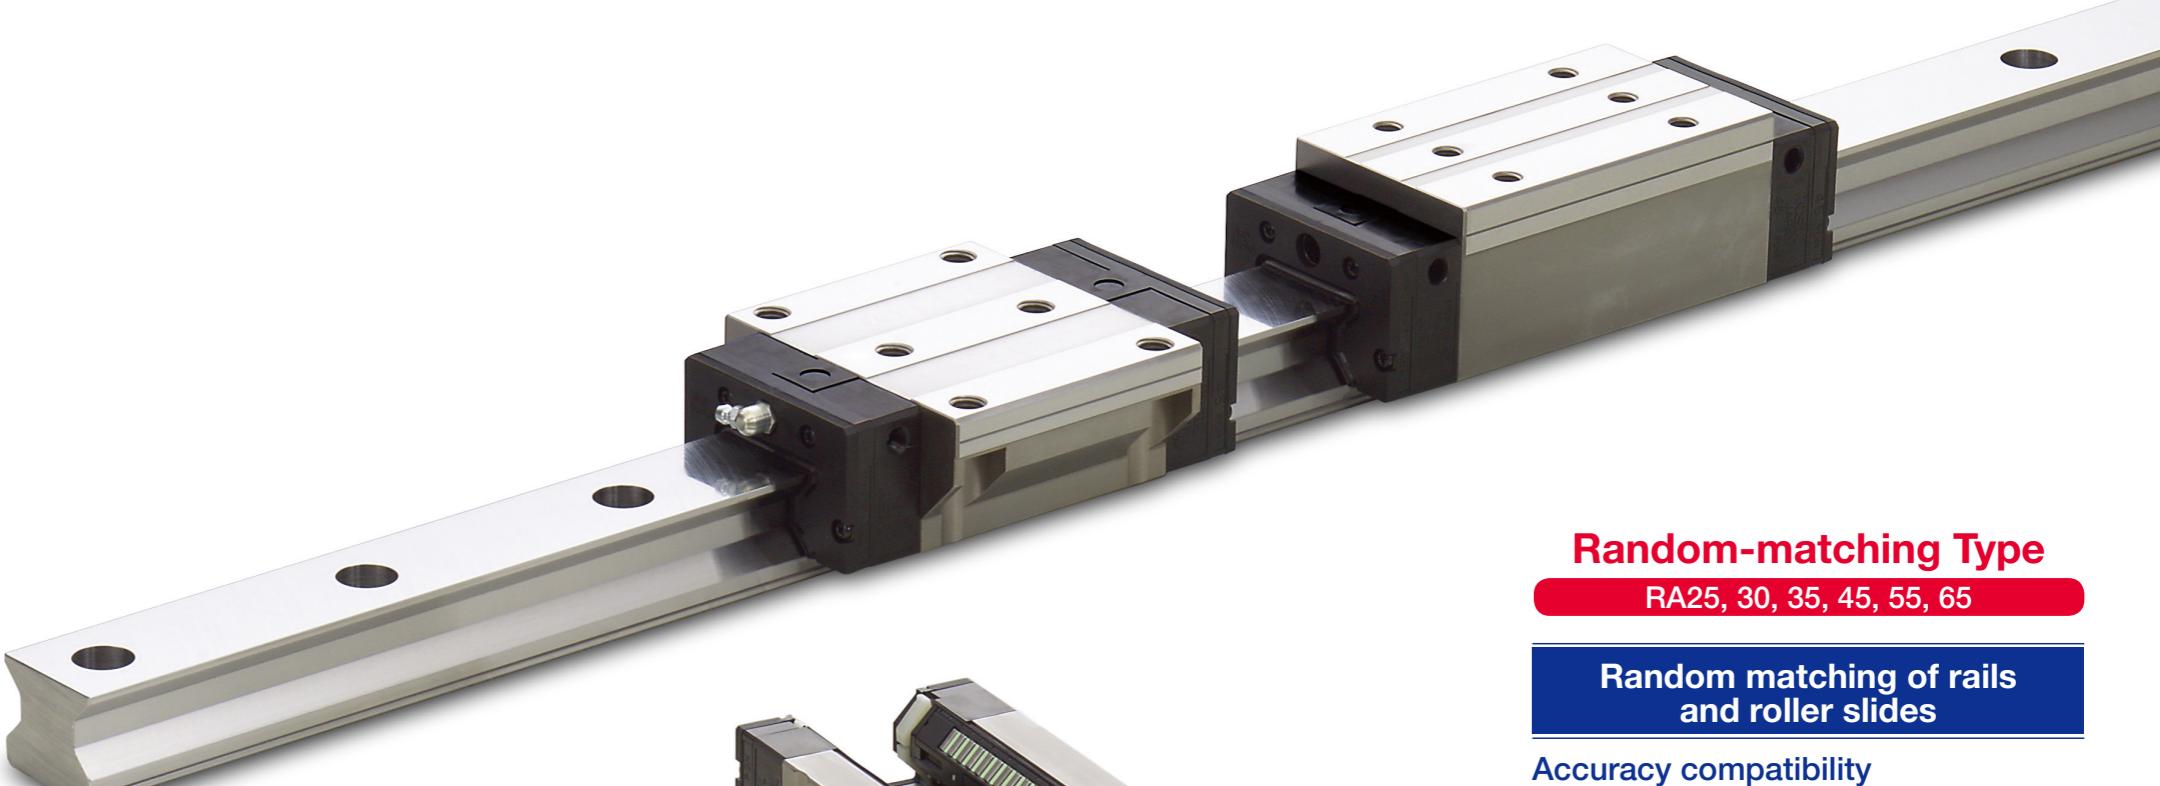

Balanced four-directional iso-load specifications

Example of roller slide deformation analysis

Analysis example of contact pressure distribution of rollers

### Random-matching Type

RA25, 30, 35, 45, 55, 65

### Random matching of rails and roller slides

#### Accuracy compatibility

The random combinations of roller slide and rail achieve high precision grade (PH) running parallelism.

#### Random matching with preload

The random combinations of roller slide and rail provide the constant rigidity with an adequate preload.

#### Random matching

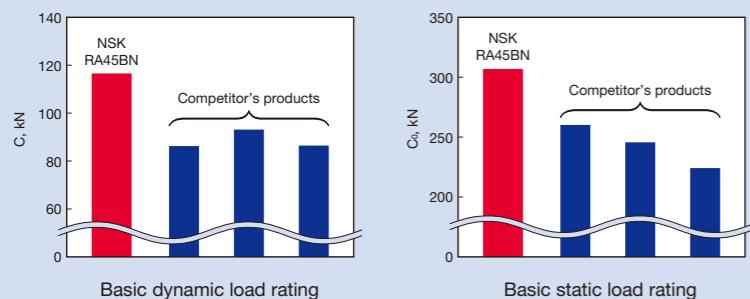

The rails and roller slides can be selected in single unit quantities.

## Features

### 1. Super-high load capacity

By installing rollers that are the largest possible diameter and length within the existing standard cross-section dimension in a rational layout based on analysis technology, we have realized the world's highest load capacity\*, far superior to conventional roller guides. Super-long life is achieved and impact load can be sufficiently handled.

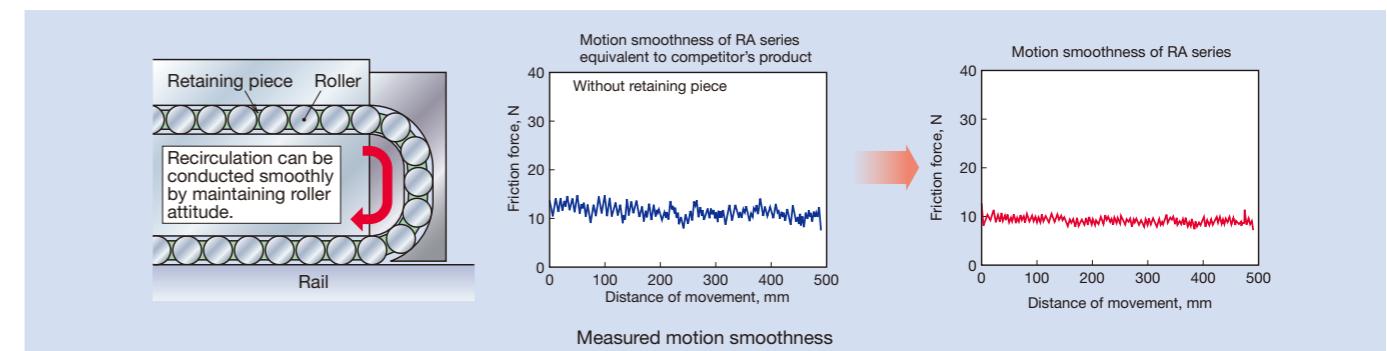

\* Compared with products of the same size, as of September 1, 2003, researched by NSK.

The basic load rating which is shown in the figures complies with ISO standards.  
Standards for basic dynamic load rating: ISO14728-1  
Standards for basic static load rating: ISO14728-2

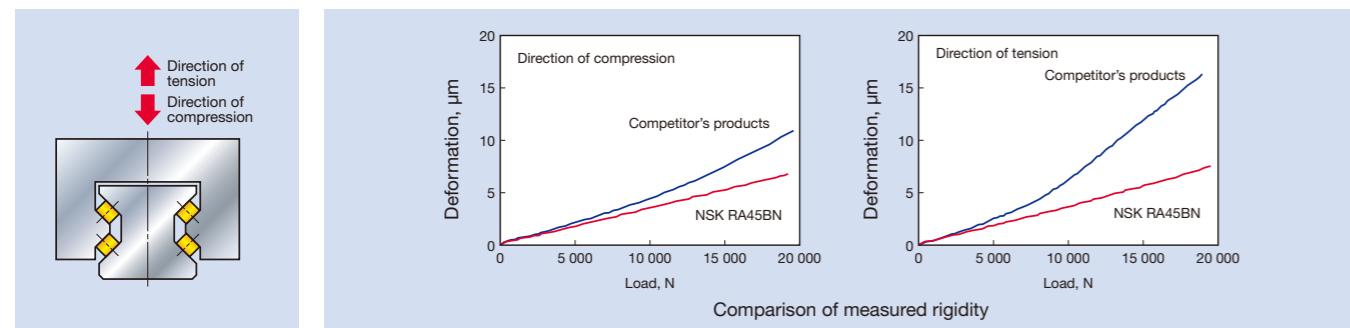

### 5. Smooth motion

Installing a retaining piece between rollers and restraining the skew peculiar to roller bearings achieve smooth motion. The reduction of friction variation provides stable tracking in the complicated trajectory control.

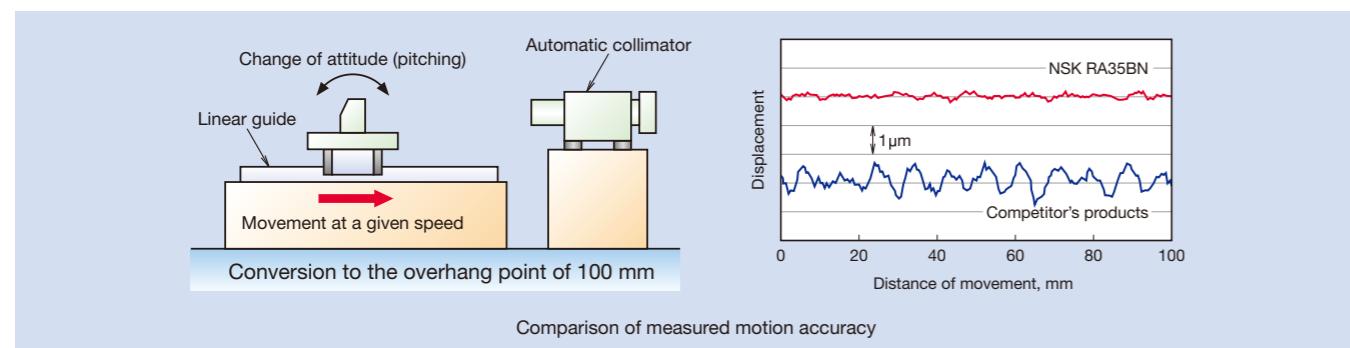

### 2. Super-high rigidity

Using NSK's advanced analysis technology, we pursued a complete, optimal design, down to the detailed shape of roller slides and rails, thereby realizing super-high rigidity superior to that of competitor's roller guides.

### 3. Super-high motion accuracy

NSK has developed its own unique method of simulating rolling element passage vibration and method of designing optimal roller slide specifications for damping roller passage vibration. These developments have dramatically enhanced roller slide motion accuracy for the RA series.

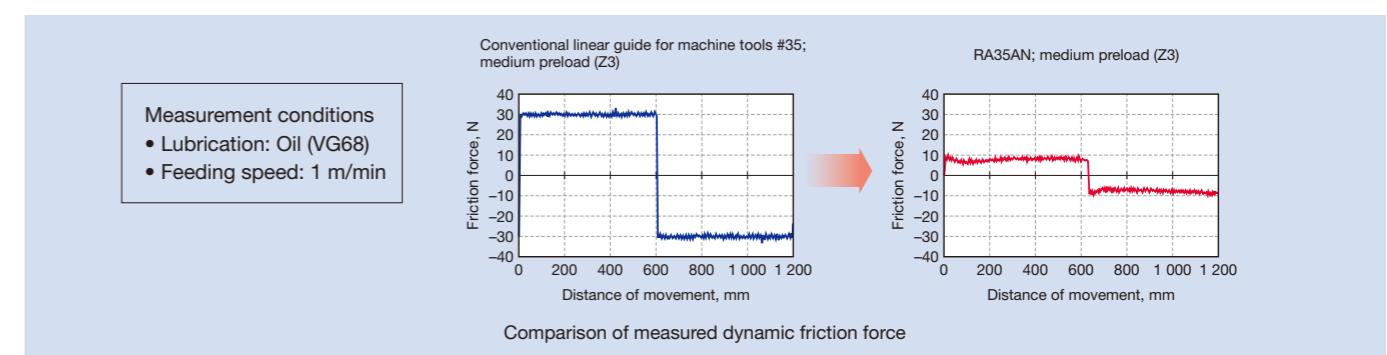

### 4. Mounting dimensions compatibility

The outer and mounting dimensions of RA series are based on market standards. RA series can be replaced without altering equipment design. (See page 14 for mounting surface dimensions)

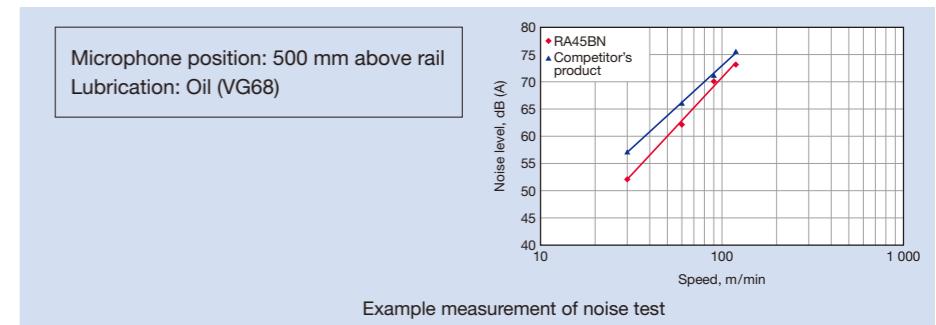

### 6. Low friction

Using rollers for rolling elements helps minimize dynamic friction.

### 7. Low noise

A retaining piece is provided between rollers to prevent collision of rollers to minimize noise.

### 8. Highly dust-proof and maintenance-free operation

Various seals of roller slide, bolt-hole cap, and rail cover are available as options. Highly dustproof V1 seal and V1 bottom seal with excellent dustproof performance are also available. The highly regarded NSK K1™ lubrication unit is also available to satisfy customer needs for long-term, maintenance-free operation. (Availability of some options depends on size. Please confirm details of dustproof specifications on page 11.)

## Specifications

### 1. Roller Slide Types and Shapes

- Two types of roller slides are available in this series: one with a mounting flange and a square type with tapped holes and no flange.
- A compact, low-profile square type is now available.
- On the mounting hole of the flange type, the tapped part is used to fix the roller slide from the top surface, and the minor diameter can be used as a bolt hole from the bottom. This provides mounting from both directions, top and bottom.
- Roller slide length can be specified by standard high load type or special long, super-high load type.

Fig. 1 Square type

Roller slide shape code

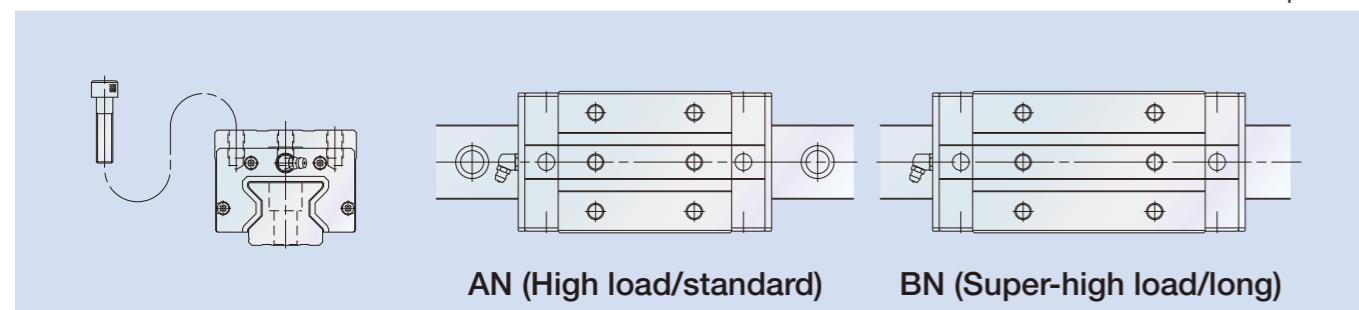

Fig. 2 Low-profile type

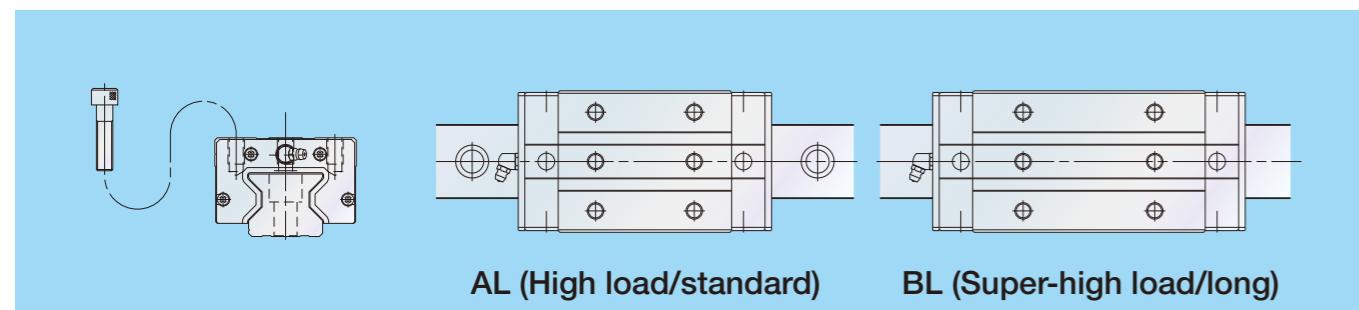

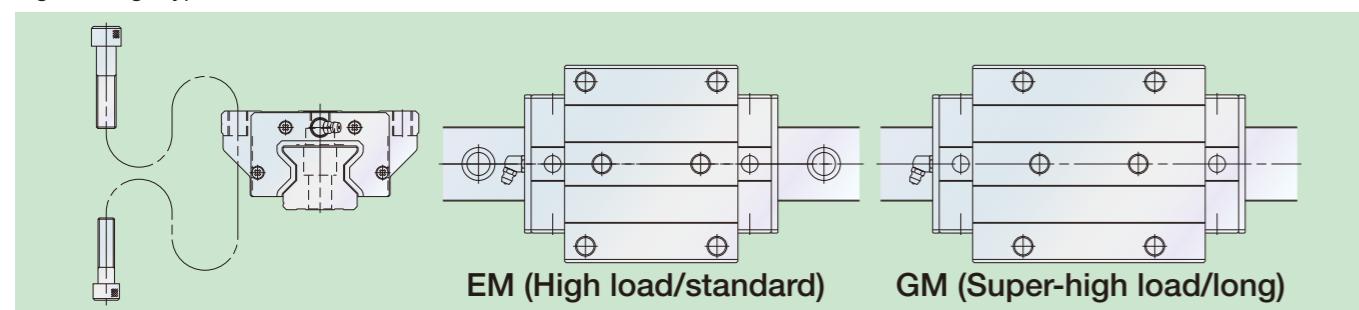

Fig. 3 Flange type

### 2. Accuracy

The preloaded assembly has four accuracy grades; Ultra precision P3, Super precision P4, High precision P5, and Precision P6 grades, while the random-matching type has High precision PH grade only.

Table 1 Tolerance of preloaded assembly

Characteristics	Accuracy grade			
	Ultra precision P3	Super precision P4	High precision P5	Precision grade P6
Mounting height $H$	$\pm 8$ 3	$\pm 10$ 5	$\pm 20$ 7	$\pm 40$ 15
Variation of $H$ (All roller slides on a set of rails)				
Mounting width $W_2$ or $W_3$	$\pm 10$ 3	$\pm 15$ 7	$\pm 25$ 10	$\pm 50$ 20
Variation of $W_2$ or $W_3$ (All roller slides on reference rail)				
Running parallelism of surface C to surface A Running parallelism of surface D to surface B	See Table 3 and Fig. 4			

Table 2 Tolerance of random-matching type

Unit:  $\mu\text{m}$

Characteristics	Accuracy grade	High precision PH
Mounting height $H$		$\pm 20$
Variation of mounting height $H$	15 ①	25 ②
Mounting width $W_2$ or $W_3$	$\pm 25$	
Variation of mounting width $W_2$ or $W_3$	20	
Running parallelism of surface C to surface A		See Table 3 and Fig. 4
Running parallelism of surface D to surface B		

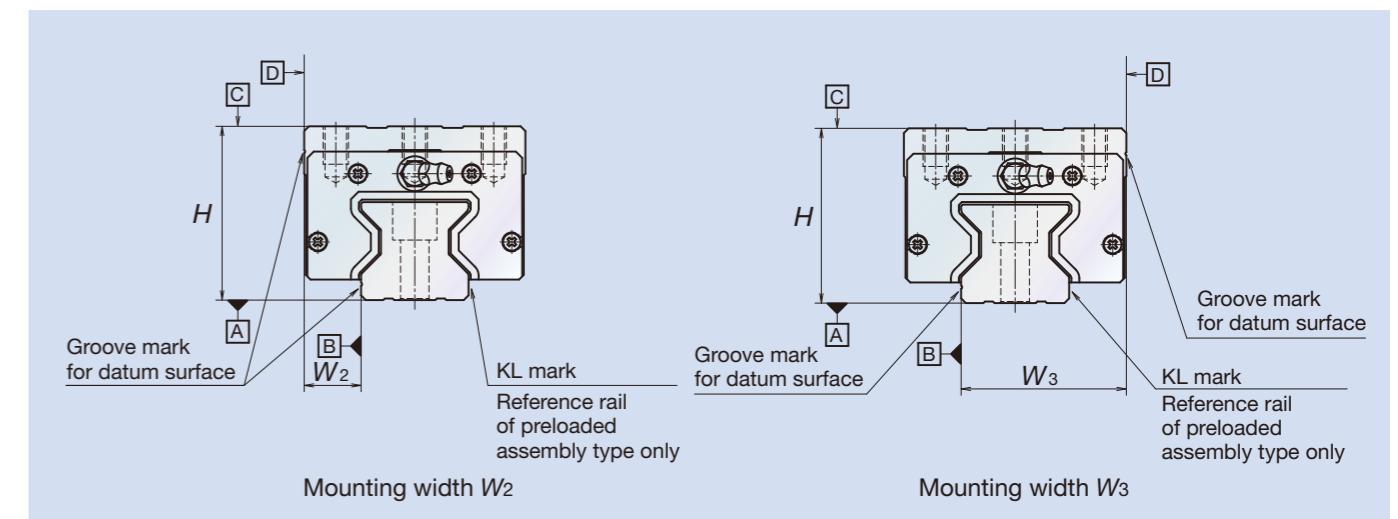

Note: ① Variation on the same rail ② Variation on multiple rails

Table 3 Running parallelism

Unit:  $\mu\text{m}$

Rail length (mm)	Ultra precision P3	Super precision P4	High precision P5, PH	Precision grade P6
over - 50 or less	2	2	2	4
50 - 80	2	2	3	4
80 - 125	2	2	3	4
125 - 200	2	2	3.5	5
200 - 250	2	2.5	4.5	6
250 - 315	2	2.5	5	6.5
315 - 400	2	3	5.5	7
400 - 500	2	3	6	7.5
500 - 630	2	3.5	6.5	8.5
630 - 800	2	4	7	9.5
800 - 1 000	2.5	4.5	7.5	10
1 000 - 1 250	3	5	8.5	12

2 500 - 3 150	5.5	8.5	13	18
3 150 - 4 000	6	9.5	14	19

Fig. 4 Specifications of accuracy

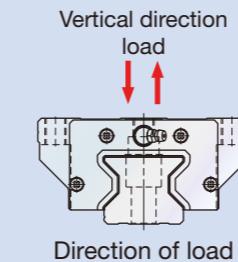

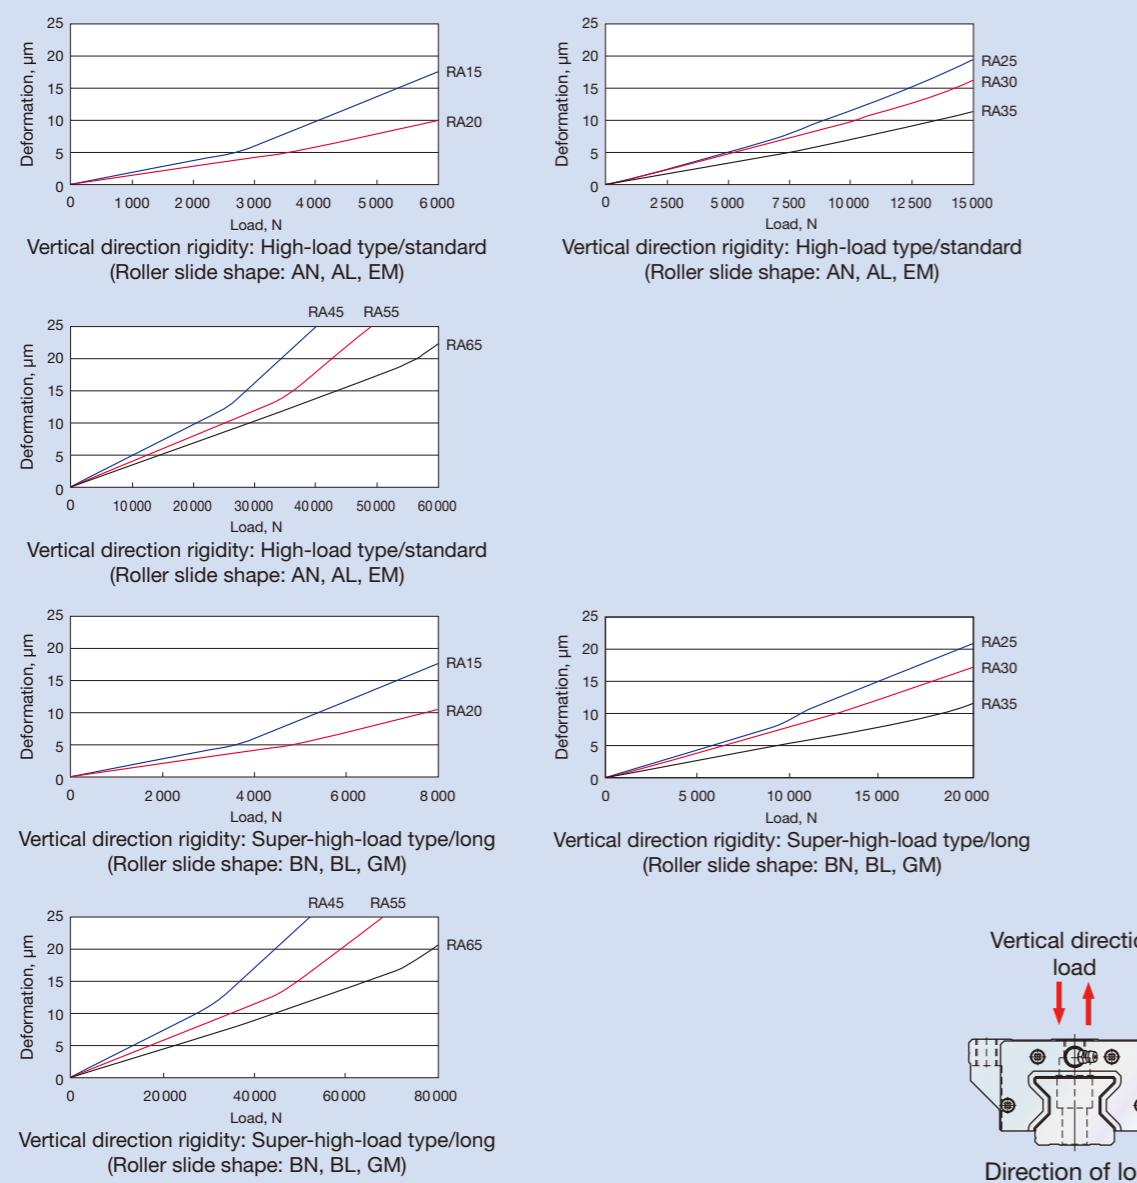

### 3. Preload and Rigidity

Medium preload Z3 and slight preload Z1 are available for preloaded assembly. Medium preload ZH and slight preload ZZ are available for random-matching type. Typical measurement data of preload and rigidity are shown below.

Table 4 Preload

Model No.	High-load type		Super-high-load type		Unit: N
	Slight preload (Z1)	Medium preload (Z3)	Slight preload (Z1)	Medium preload (Z3)	
RA15	—	1 030	—	1 300	
RA20	—	1 920	—	2 400	
RA25	880	2 920	1 060	3 540	
RA30	1 170	3 890	1 430	4 760	
RA35	1 600	5 330	2 020	6 740

RA65	6 500	21 000	8 500	28 800	

Fig. 5 Vertical direction theoretical rigidity line

### 4. Basic Load Rating and Rated Life

Basic dynamic load rating that expresses load capacity is established by ISO standards (ISO14728-1) for linear guides. With basic dynamic load rating, direction and size do not fluctuate so that rated fatigue life is 100 km. Load rating for NSK Linear Guide complies with ISO standards. With the RA series, dynamic load rating is the same in both the vertical and horizontal directions (4-way equal load specs.). Rated fatigue life  $L$  is calculated by the following formula when load  $F$  is applied to the roller slide in the horizontal or vertical direction only.

- This life formula is different from that for linear guides with ball rolling elements.
- $f_w$  is load factor. Refer to the respective value from the following Table 5 as a guideline according to potential vibration and the impact of the machine in which the linear guide is used, and select the load factor.

$$L = 100 \times \left( \frac{C}{f_w \cdot F} \right)^{\frac{10}{3}} (\text{km})$$

Table 5 Load factor  $f_w$ 

Impact and/or vibration	Load factor
No impact and vibration from the outside	1.0 – 1.5
With impact and/or vibration from the outside	1.5 – 2.0
With heavy impact and/or vibration from the outside	2.0 – 3.0

Load applied to the linear guide (ball slide load) comes from various directions up/down and right/left directions and/or as moment load. Sometimes more than one type of load is applied simultaneously. Sometimes volume and direction of the load may change.

Varying load cannot be used as it is to calculate life of linear guide. Therefore, it is necessary to use a hypothetical load to ball slide with a constant volume, which would generate a value equivalent to an actual fatigue life. This is called "dynamic equivalent load." For actual calculation, use the loads of Table 6.

Fig. 6 Direction of load

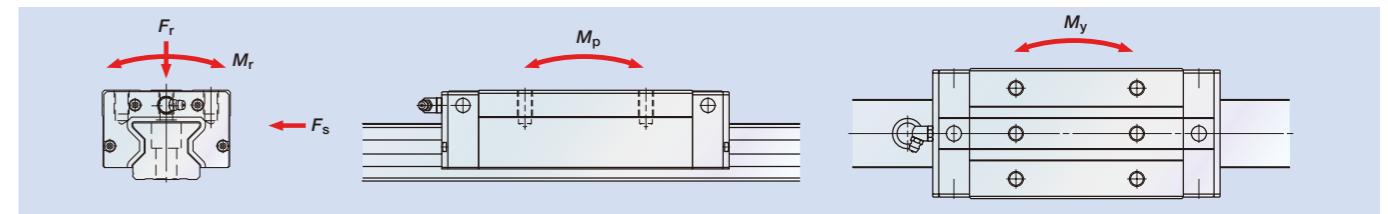

Table 6 Loads in the arrangement of linear guide

Pattern	Arrangement of linear guide	Loads necessary to calculate dynamic equivalent load					Dynamic equivalent load	
		Load		Moment load				
		Up/down (vertical)	Right/left (lateral)	Rolling	Pitching	Yawing		
1		$F_r$	$F_s$	$M_r$	$M_p$	$M_y$	$F_r = F_r$ $F_{se} = F_s \tan\alpha$ $F_{re} = \varepsilon_r M_r$ $F_{pe} = \varepsilon_p M_p$ $F_{ye} = \varepsilon_y M_y$	
2		$F_r$	$F_s$	$M_r$			$\alpha$ : Contact angle (=45°) Dynamic equivalent coefficient $\varepsilon_r$ : Rolling direction $\varepsilon_p$ : Pitching direction $\varepsilon_y$ : Yawing direction	
3		$F_r$	$F_s$		$M_p$	$M_y$		
4		$F_r$	$F_s$					

Table 7 Dynamic equivalent coefficient

Model No.	Dynamic equivalent coefficient (1/m)		
	$\varepsilon_r$	$\varepsilon_p$	$\varepsilon_y$
RA15 High load type	105	95	95
RA15 Super-high load type	105	70	70
RA20 High load type	79	74	74
RA20 Super-high load type	79	55	55
RA25 High load type	71	64	64
RA25 Super-high load type	71	50	50
RA30 High load type	56	58	58
RA30 Super-high load type	56	44	44
RA35 High load type	46	52	52
RA35 Super-high load type	46	39	39
RA45 High load type	37	40	40
RA45 Super-high load type	37	30	30
RA55 High load type	32	33	33
RA55 Super-high load type	32	24	24
RA65 High load type	26	28	28
RA65 Super-high load type	26	19	19

Formula is determined by the relationship of loads in terms of volume. Full dynamic equivalent load can be easily obtained by using each coefficient.

After obtaining the dynamic equivalent of the necessary load directions from Table 7, use the formulas below to calculate full dynamic equivalent loads.

- When  $F_r$  is the largest load:  $F_e = F_r + 0.5F_{se} + 0.5F_{re} + 0.5F_{pe} + 0.5F_{ye}$
- When  $F_{se}$  is the largest load:  $F_e = 0.5F_r + F_{se} + 0.5F_{re} + 0.5F_{pe} + 0.5F_{ye}$
- When  $F_{re}$  is the largest load:  $F_e = 0.5F_r + 0.5F_{se} + F_{re} + 0.5F_{pe} + 0.5F_{ye}$
- When  $F_{pe}$  is the largest load:  $F_e = 0.5F_r + 0.5F_{se} + 0.5F_{re} + F_{pe} + 0.5F_{ye}$
- When  $F_{ye}$  is the largest load:  $F_e = 0.5F_r + 0.5F_{se} + 0.5F_{re} + 0.5F_{pe} + F_{ye}$

For the values of each dynamic equivalent load in the formulas above, disregard load directions and take the absolute value.

## 5. Lubrication Specifications

### (1) Types of lubrication accessories

- Fig. 9 and Table 9 show grease fittings and tube fittings.

### (2) Mounting position of lubrication accessories

- The standard position of grease fittings and tube fittings is the end face of roller slide. We can mount them on a side of end cap for an option. (Fig. 7) Please consult NSK for installation of grease or tube fittings to the roller slide body or the side of end cap.
- A lubrication hole can also be provided on the top of the end cap. Fig. 8 and Table 8 show the mounting position. A spacer is required for AN and BN shape roller slides. The spacers are available from NSK.
- When using a piping unit with a thread of M6 × 1, a connector is required to connect the piping unit to a grease fitting mounting hole with M6 × 0.75. Connectors are available from NSK.

### (3) Cautions for oil lubrication

- If oil lubrication is used, the oil may not pervade the rolling surface in accordance with the roller slide mounting conditions such as upside down mounting and wall mounting. In these situations, consult with NSK.
- When using an oil mist lubricating system, please confirm how much oil is needed for each outlet port.

## 6. Dust-proof components

### (1) Standard specification

The RA series is equipped with end, inner<sup>1)</sup> and bottom seals to prevent foreign matter from entering the inside of the roller slide. Under normal applications, the RA series can be used without modification. For severe usage conditions, optional rail covers and highly dustproof V1 seal are available. Contact NSK for information on how to mount the cover.

Table 10 Optional parts for dustproof

Name	Purpose
NSK K1 lubrication unit	Made of oil impregnated resin. Enhances lubricating functions.
Double seal	It combines two end seals for enhancing sealing function.
Protector	Protect the end seal from hot and hard contaminants.
Rail cap	Prevents foreign matters, such as swarf generated in cutting operation from clogging the rail-mounting holes.
Rail cover <sup>2)</sup>	Covers the rail top surface, and prevents foreign matters, such as cutting dust, from collecting in the rail mounting holes.
Highly dustproof V1 seal <sup>3)</sup>	An end seal that improves wear resistance maintains highly dustproof performance over a long period of time.
V1 bottom seal <sup>4)</sup>	A bottom seal exhibits the high dustproof performance same as the highly dustproof V1 seal.

1) Inner seals for the models of RA15 and RA20 are available as option. 2) Rail cover is available for the models of RA25 to RA65.

3) Highly dustproof V1 seal is available for the models of RA25 to RA65. 4) V1 bottom seal is available for the models of RA35 to RA65.

### (2) NSK K1™ lubrication unit

Table 11 shows the dimension of linear guides equipped with the NSK K1 lubrication unit.

Table 11

Model No.	Roller slide length	Roller slide model	Standard roller slide length	With two NSK K1	Thickness of NSK K1 $V_1$	Protruding area of the grease fitting $N$	Unit: mm

RA65	Standard	AN, EM	228.4	243.4	7.5	(14)	
	Long	BN, GM	302.5	317.5			

Note: Roller slide length equipped with NSK K1 = (Standard roller slide length) + (Thickness of NSK K1 Case Unit × Number of NSK K1 Case Unit)

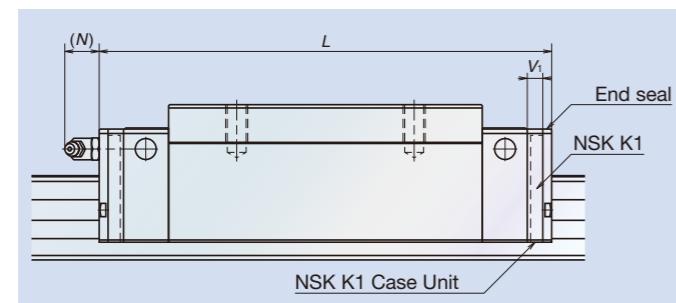

Fig. 10 View of the roller slide equipped with the dust-proof parts

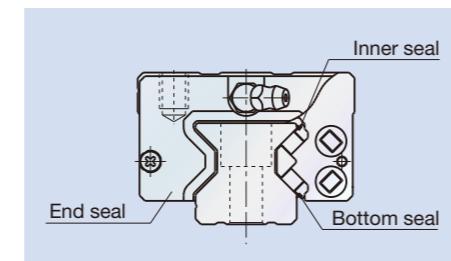

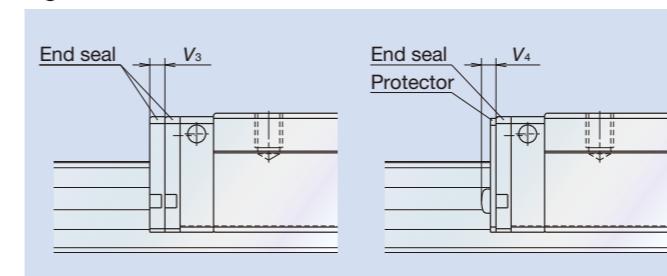

Fig. 11 Rail cover

### (3) Double seal and protector

For RA Series, double seal and protector can be installed only before shipping from the factory. Table 12 shows the increased thickness when end seal and protector are installed.

Fig. 12

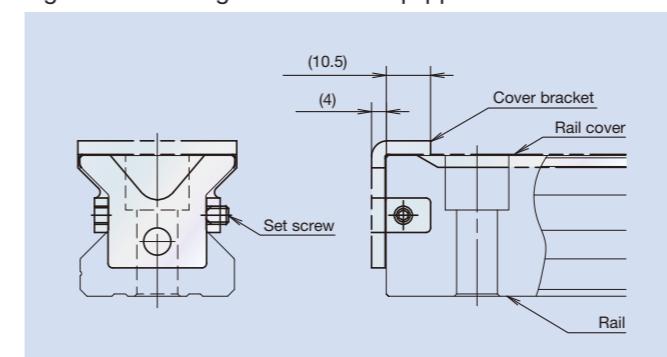

### (4) Rail cover

When the rail cover is used, use the cover bracket to secure the rail cover. Fig. 13 shows the dimensions for the cover bracket. The required room at the end of the rail is:

- Inside: 10.5 mm or less
  - Outside: 4 mm or less (Common to the models of RA25 to RA65)
- Please confirm the interference with your machine at the stroke end.
- Machine stroke
  - Room for the end of the rail

The height of the rail with the rail cover is shown in Table 13.

Fig. 13 End configuration of rail equipped with the rail cover

### (5) Cap to plug the rail mounting bolt hole

Table 14 Cap to plug rail mounting bolt hole

Model No.	Bolt to secure rail	Cap reference No.	Quantity/case
RA15	M4	LG-CAP/M4	20
RA20	M5	LG-CAP/M5

RA30	28	28.2
RA35	31	31.25
RA45	38	38.3
RA55	43.5	43.8
RA65	55	55.3

Bolt size for rail mounting and cap reference number are shown in Table 14.

### (6) Specification with highly dustproof V1 seal and V1 bottom seal

RA25, RA30, RA35, RA45, RA55, and RA65 also have the specification with newly developed, highly dustproof V1 seal which is the end seal with enhanced abrasion resistance. Highly dustproof V1 seal made of new materials and in a new shape for better abrasion resistance prevents foreign matter getting into the roller slide for a long period.

RA35, RA45, RA55, and RA65 also have prepared highly dustproof V1 bottom seal. In addition, outstanding lubrication effects by NSK K1 further improves the durability.

High dustproof V1 bottom seal and NSK K1 can be selected individually according to the application.

The bolt hole caps whose shape is partly changed eliminate building up of foreign matter in and around the rail mounting holes and prevent foreign matter from entering into the roller slide. Otherwise, the rail cover with higher dustproofness can be selected.

Table 15 shows the dimensions of roller slides equipped with V1 seal and V1 bottom seal.

Table 15 Unit: mm

Model No.	Roller slide length	Roller slide type	Standard roller slide length L	Roller slide length equipped with V1 seal and NSK K1 L	Slide bottom face height equipped with V1 seal and V1 bottom seal E <sub>V1</sub>	Thickness of V1 seal V <sub>0</sub>	Thickness of K1 case unit V <sub>1</sub>
RA25	Standard	AN, AL, EM	97.5	111.3	-	5.1	5
	Long	BN, BL, GM	115.5	129.3			
RA30	Standard	AN, AL, EM	110.8	126.8	-	5.4	6
	Long	BN, BL, GM	135.4	151.4

	Long	BN, BL, GM	190	209.2			
RA55	Standard	AN, AL, EM	184	203.2	min 6.2	6.6	7
	Long	BN, BL, GM	234	253.2			
RA65	Standard	AN, EM	228.4	251.2	min 10.2	8.9	7.5
	Long	BN, GM	302.5	325.3			

The detailed contents of the high dustproof V1 seal and V1 bottom seal are introduced in the catalog "CAT No. 3334" of NSK Linear Guide™ Roller Guides with highly dustproof V1 seal and V1 bottom seals.

### Use of linear guides in a contaminated environment

(1) Using a linear guide in a contaminated environment has serious effects on lubrication condition and durability of the linear guide. We recommend evaluation tests with your specific application.

(2) If use in a contaminated environment is expected, fill in the technical data sheet for linear guides in contaminated environments.

(Please consult NSK for the details of the technical data sheet.)

### 7. Maximum rail length

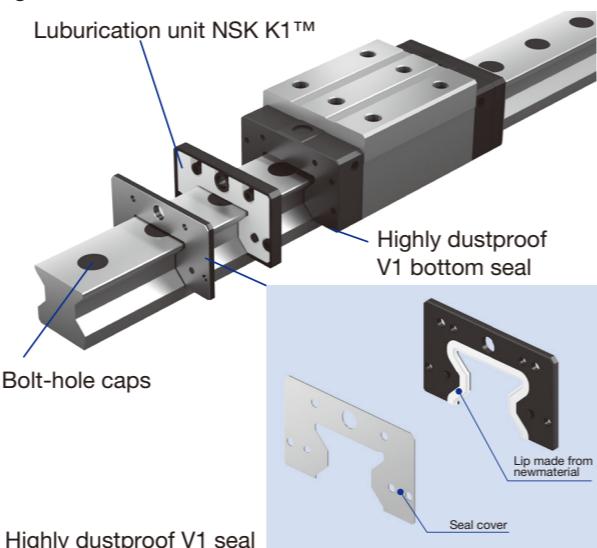

Table 16 shows the limitations of rail length(maximum length). However, the limitations vary by accuracy grades.

Table 16 Length limitation of rails Unit: mm

Size	RA15	RA20	RA25	RA30	RA35	RA45	RA55	RA65
Maximum length	2 000	3 000	3 900	3 900	3 900	3 650	3 600	3 600

Note: Rails can be butted if user requirement exceeds the rail length shown in the table.  
Please consult NSK.

Fig. 14

### 8. Installation

#### (1) Mounting tolerance

Mounting tolerance results in harmful effects such as shortened operating life, deterioration in motion accuracy, and friction variation.

NSK particularly focuses on operating life, and sets an operating life value of more than 10 000 km calculated under the following conditions as mounting tolerance:

- The load per roller slide is 10% of basic dynamic load rating C.
- The rigidity of machine is infinite.

The tolerance in Fig. 15 is shown in the Table 17 as typical tolerance.

Fig. 15 Mounting tolerance

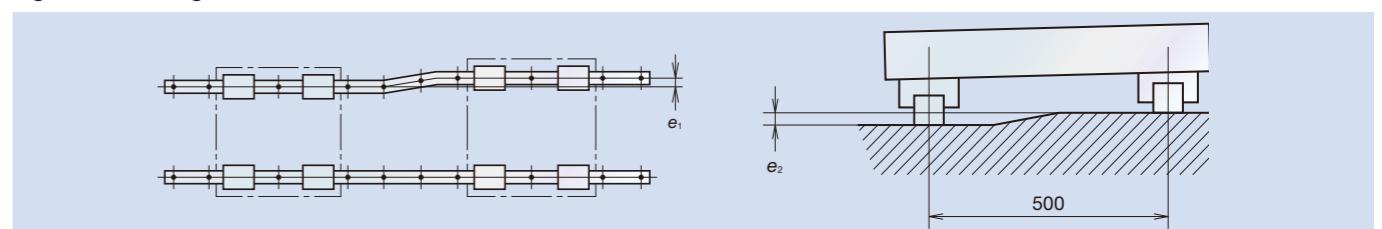

Table 17 Mounting tolerance

Value	Preload	Model No.							
		Z1, ZZ	-	-	14	18	21	27	
Permissible values of parallelism in two rails e <sub>1</sub>	Z3, ZH	5	7	9	11	13	17	19	
Permissible values of parallelism (height) in two rails e <sub>2</sub>	Z1, ZZ	290μm/500mm							
	Z3, ZH	150μm/500mm							

#### (2) Shoulder height and corner radius of mounting surface

Fig. 16 and Table 18 show shoulder height and corner radius of the mounting surface, when the rail or the roller slide is pressed to the shoulder of the machine base or table (the raised section from where the mounting surface begins) and fixed horizontally.

Fig. 16 Datum face of roller guide and shoulder

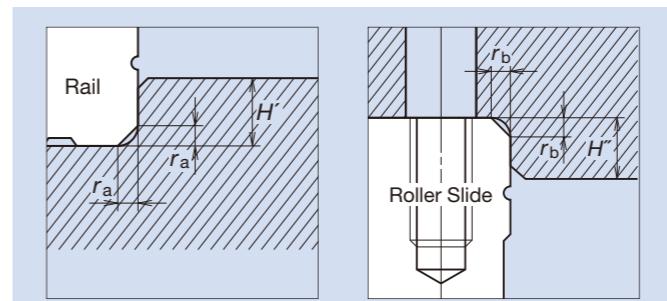

Table 18 Shoulder height and corner radius of the mounting surface

Model No.	Shoulder height		Corner radius (maximum)	
	H'	H''	r <sub>a</sub>	r <sub>b</sub>
RA15	3	4	0.5	0.5
RA20	4	5	0.5	0.5
RA25	4	5	0.5	1
RA30	5	6	1	1
RA35	5	6	1	1
RA45	6	8	1.5	1
RA55	7	10	1.5	1.5
RA65	11	11	1.5	1.5

### Handling Precautions

- ① Operating temperature limits should normally be less than 80°C.
- ② If using NSK K1™, service temperature should not exceed 50°C (or 80°C instantaneously). Make sure the unit does not come in contact with organic solvents with that can be used for degreasing. Do not place the unit in a location exposed to white kerosene or rust prevention oil containing white kerosene.
- ③ When transferring the roller slide onto the rail, or vice versa:
  - Do not remove an unnecessary roller slide from the rail as much as you can.
  - Use the provided provisional rail to prevent dents or scratches on the raceways caused by the roller slide that is jammed into the one from the other. It also prevents the rollers from dropping.
  - When transferring the roller slide onto the rail, or vice versa, butt the provisional rail up against the rail and slide it directly from one onto the other.
  - Use a clean provisional rail. Do not use the provisional rail that is contaminated with particles or uses different grease from that of the relevant roller slide.

## Square type (tapped mounting holes)

RA-AN (High-load type/standard), RA-BN (Super-high-load type/long)
