

Jaw Couplings

SPRFLEX

Max. nominal torque [N·m]	50
Pilot bore/added work ranges [mm]	$\phi 4 \sim 48$
Operating temperature [°C]	- 20 ~ 80
Backlash	Yes
Driver	Induction motor
Application	Pumps, fans, textile machinery

Jaw Couplings that Use Rubber as Buffer Material

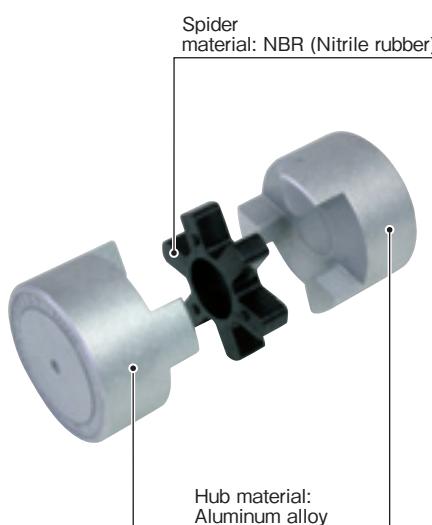

These jaw couplings have simpler designs that sandwich a buffer material (spider) between two hubs. The hub is lightweight, being made of aluminum alloy. Input and output can be coupled or separated easily by simply moving the coupling in the axial.

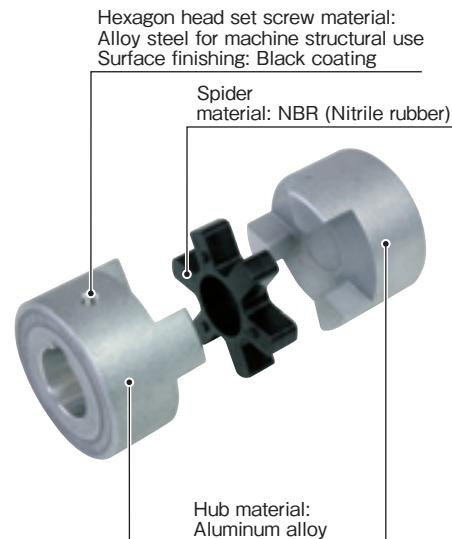

Structure and Materials

■ Pilot bore

■ Key/set screw types

■ Spider (rubber buffer)

Specifications

Model	Torque		Misalignment			Max. rotation speed [min⁻¹]	Moment of inertia [kg·m²]	Mass [kg]
	Nominal [N·m]	Max. [N·m]	Parallel [mm]	Angular [°]	Axial [mm]			
AL-035	0.5	1.5	0.1	0.5	+ 0.3	18000	0.38×10^{-6}	0.01
AL-050	1.5	4.5	0.2	1.0	± 0.5	12000	5.10×10^{-6}	0.06
AL-070	3	9	0.2	1.0	± 0.5	9000	1.79×10^{-5}	0.12
AL-075	5	15	0.2	1.0	± 0.5	7000	5.36×10^{-5}	0.21
AL-090	8	24	0.3	1.0	± 0.5	6000	1.15×10^{-4}	0.31
AL-095	10	30	0.3	1.0	± 0.5	6000	1.40×10^{-4}	0.36
AL-100	25	75	0.3	1.0	± 0.7	5000	4.34×10^{-4}	0.78
AL-110	50	150	0.3	1.0	± 0.7	4000	1.43×10^{-3}	1.56

* Max. rotation speed does not take into account dynamic balance or mounting misalignment.

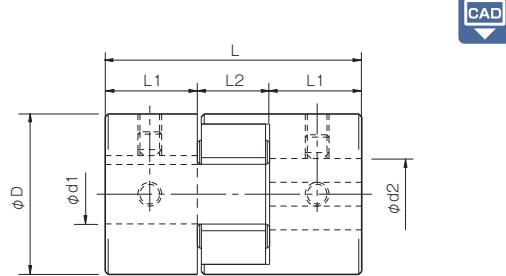

* The moment of inertia and mass are measured for the pilot bore.

Dimensions (Couplings)

Model	d1 + d2			D	L	L1	L2	Unit [mm]
	Pilot bore	Min.	Max.					
AL-035	4	4	8	16.1	20.5	6.5	7.5 [*] 1	
AL-050	5	6	16	27	43.2	15.5	12.2	
AL-070	5	6	20	35	49.2	18.5	12.2	
AL-075	5	7	26	45	54.4	21.0	12.4	
AL-090	5	9	28	54	55.0	21.0	13.0	
AL-095	5	9	28	55	61.0	24.0	13.0	
AL-100	5	11	36	66	88.0	35.0	18.0	
AL-110	5	11	48	85	110.0	44.0	22.0	

* "Pilot bore" refers to center processing. Minimums and maximums for d1 and d2 are values at the MIKI PULLEY standard hole-drilling standards.

* The value marked *1 leaves a 1 mm space for the thickness of the spider body.

Standard Hole-Drilling Standards

- Set screw and keyway positions are not on the same plane. Positioning precision for keyway milling is determined by sight, so contact Miki Pulley when the keyway requires a positioning precision for a particular hub.
- The set screws are included with the product.

* The Φ11 or below requirement under the new JIS standards and Φ11 requirement for the new motor standards are the same as the old JIS standards (class 2).

* For AL-035, the tolerance is ± 0.05 regardless of bore diameter. The set screw size is M3.

Items Checked for Design Purposes

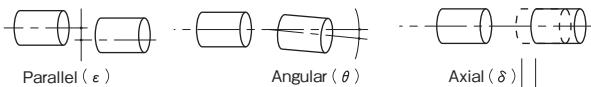

Special Items to Take Note of

You should note the following to prevent any problems.

- (1) Always be careful of parallel, angular, and axial misalignment.
- (2) Always tighten bolts with the specified torque.

Precautions for Handling

- (1) Couplings are designed for use within an operating temperature from -20°C to 80°C. Although SPRFLEX couplings are designed to be waterproof and oilproof, do not subject them to excessive amounts of water or oil as these may cause deterioration. Use and storage in direct sunlight may shorten coupling service life, so cover couplings appropriately.
- (2) To get full coupling performance, mount couplings so that differences between coupling centers during operation are within the misalignment shown in the specifications table. However, this misalignment is the maximum value when each occurs independently, so make the allowable value when they combine 50% or less of this value. Also, the maximum rotation speed does not take into account dynamic balance or mounting misalignment, so factor in the dynamic balance and mounting misalignment when using the couplings at or above 3600 min⁻¹. Be particularly careful to mount the couplings so that the mounting misalignment at rotation speeds of 2000 min⁻¹ or more is no greater than 50% or the allowable value.

- (3) Check centering by holding a straight-edge to the outer circumference of the main body, using two points about 90° apart. Spider service life is greatly affected by the precision of centering. We recommend matching of centering locations as the method for centering two shafts.
- (4) Remove any rust, dust, oil or the like from the inner diameter surfaces of the shaft and coupling.
- (5) The length of insertion of the shaft into the coupling should be the dimension L1 on the dimensions table.
- (6) Tighten set screws with hex socket heads to the tightening torques shown below using a calibrated torque screwdriver.

Size of hex-socket-head set screw	M3	M4	M5	M6	M8	M10
Tightening torque [N·m]	0.7	1.7	3.6	6.0	14.2	28.0
